

Telavox and Clementa Database:

A database of all Telavox and Clementa clocks compiled by Chris Bolwell of the Telavox clock blog. It is compiled from clocks he examined, owned, or had the information forwarded by owners. If you have another clock, we can add your clock's details to this version in ClockDoc.

The clocks are in order of case number, found on the small, metal, numbered label that is usually underneath or on the back of the case. The visible (rear) clock movement plate always has another number hot-pressed into the fibre. One sharp-sighted owner pointed out that there are sometimes very small numbers and letters engraved on the back plate too. Though this is not commonplace and may be limited to a specific period of manufacture.

The very few dated Telavox clocks found so far have what appears to be a common rubber datestamp marking inside the wooden case. These dates may help to aid (very rough) dating of your own Telavox clocks. It is a shame that the dated clocks are so relatively few. There are also some obvious anomalies where the date doesn't quite seem to match the serial numbers. The reason for the rarity of date stamping is unknown.

The last clock on the list has a very high serial number indeed but has a Telavox case rather than the expected Clementa. Yet the movement number is earlier than the one remaining Clementa with an original movement.

Key to database

HG= Number of Hammers and Gongs.

Qrtz in the list means that a modern quartz battery driven plastic replacement movement has been fitted replacing the original torsion pendulum movement.

Dial details below are numeral style first, then colour, followed by chapter ring colour.

Blank cell = missing information (or no date)

Case number	Dial	Case style	Movement number	Strike	Date stamp
Telavox clocks					
1578	Black on Gold	Bakelite drum	01132	Bell
